

Bear Roastery Operations Platform — Quick Guide

A daily-use guide for roasters and packers using the RoasterHub system.

ROASTER — Daily Workflow

1. Logging a Roast

1. Open **Roasts** from the dashboard
2. Enter coffee, container ID (e.g. XL01), date, batches, roasted weight
3. Save

→ The container appears in Traceability with status **Waiting**

2. Filling Buckets (Bar 5kg)

Do this for any container with bar coffee orders.

1. Go to **Traceability** → **Containers**
2. Find the container (in Waiting or Active)
3. Tap  **Fill Buckets**
4. Camera opens — scan each empty bucket as you fill it with 5kg
5. Tap ✓ **Save** when done

→ Each scanned bucket is now linked to that coffee + roast

→ The container's remaining stock auto-deducts

3. Moving a Container to Active

When a container has finished degassing and is ready to pack from:

1. Go to **Traceability** → **Containers**
2. Find the container in  **WAITING**
3. Tap → **Move to Active**

→ Container is now available for the packer to use

4. Handling Bucket Returns

When buckets come back from shops:

1. Go to **Traceability** → **Containers**
2. Tap  **Bucket Returns** (top right)
3. Pick the condition: **Clean** / **Dirty** / **Damaged** / **Lost**
4. Scan each returning bucket
5. Tap ✓ **Mark Returned**

→ Buckets reset to empty, ready for next fill

→ Condition is logged for reporting

5. Emptying a Near-Empty Container

If a container has less than 5kg left and you want to send out as samples:

1. Find the container in  **ACTIVE**
 2. Tap  **Send to Samples**
 3. Confirm → coffee is logged as 30g sample bags, container empties
-

PACKER — Daily Workflow

1. Start a New Dispatch

1. Open **Traceability** from the dashboard
 2. Tap + **New Dispatch**
 3. Pick the shop the order is for (or type a name — use **Online** for online orders)
-

2. Scanning Items

1. Camera opens — point at any QR code:
 -  **Bag labels** — increments that product's count
 -  **Filled buckets** — adds a 5kg bar of its coffee
 2. Items appear in the **SCANNED** panel below
 3. To scan multiple bags of the same product, just keep scanning — or tap + to increment manually
 4. Made a mistake? Tap – to decrement or ✕ to remove
 5. Can't find a QR? Type in the search box — autocomplete suggests by coffee name
-

3. Reviewing and Confirming

1. Tap **Review** →
2. Check the breakdown — shop, totals, which container each item came from
3. Tap ✓ **Confirm** → dispatch saved

→ The dispatch appears in **Deliveries** as **In Transit** → Online orders skip "In Transit" and auto-complete

4. What Won't Work

The system will block you if:

- You try to scan a bag with no active container for that coffee → *"No active [coffee] container — activate one first"*
 - You try to scan a bucket that isn't filled → *"This bucket is empty — fill it from a container first"*
 - You scan more than a container holds → *"Not enough left in active containers"*
-

DELIVERY DAY — Driver or Shop Manager

1. Arrive at shop with the week's coffee
2. Scan the shop's QR code (stuck on the door or folder at the shop)
3. App opens "Pending Deliveries for [Shop Name]"
4. Tap ✓ **Confirm All** (or confirm individual deliveries if some are missing)

→ Dispatches flip from **In Transit** to **Delivered** → No login needed

FAQ

Q: What if I'm packing for multiple shops? Do I do one dispatch each?

A: Yes, one dispatch per shop. Finish one, then start another.

Q: Can I pack from multiple containers in one dispatch?

A: Yes — just scan bags from whatever coffee the shop needs. The system picks the oldest container (FIFO) automatically and tells you which one each bag came from.

Q: What if I scan the wrong bag?

A: Tap the – button on that row in SCANNED, or tap ✕ to remove the line entirely.

Q: The container I want isn't showing as Active. What do I do?

A: Ask the roaster to **Move to Active** in the Containers tab. It might still be degassing.

Q: A bucket came back damaged. What do I do?

A: Use  **Bucket Returns**, pick **Damaged** as the condition, and scan it. The system logs which shop returned it in what state.

Q: I'm filling a bucket but the system says the container can't fit 5kg.

A: That container is too empty for another bucket — pick a different active container, or save what you've already filled and switch.

Q: How do I know which bucket has which coffee at a glance?

A: Once filled, scanning the bucket QR (anywhere in the app) will show its contents. There's no label on the bucket itself — the QR is the identity.

Q: What about online orders?

A: Pick **Online** as the shop. These don't sit in transit — they're marked delivered the moment they're packed (since they leave with the courier, not on the van).

Q: What if I'm offline / no signal at the shop for confirmation?

A: The QR scan needs internet to confirm. If you can't confirm at the shop, mark them delivered later from the office.
